Google Checks Out Library Books

The Libraries of Harvard, Stanford, the University of Michigan, the University of Oxford, and The New York Public Library Join with Google to Digitally Scan Library Books and Make Them Searchable Online

MOUNTAIN VIEW, Calif. – December 14, 2004 – As part of its effort to make offline information searchable online, Google Inc. (NASDAQ: GOOG) today announced that it is working with the libraries of Harvard, Stanford, the University of Michigan, and the University of Oxford as well as The New York Public Library to digitally scan books from their collections so that users worldwide can search them in Google.

"Even before we started Google, we dreamed of making the incredible breadth of information that librarians so lovingly organize searchable online," said Larry Page, Google co-founder and president of Products. "Today we’re pleased to announce this program to digitize the collections of these amazing libraries so that every Google user can search them instantly.

"Our work with libraries further enhances the existing Google Print program, which enables users to find matches within the full text of books, while publishers and authors monetize that information," Page added. "Google’s mission is to organize the world’s information, and we’re excited to be working with libraries to help make this mission a reality."

Today’s announcement is an expansion of the Google Print™ program, which assists publishers in making books and other offline information searchable online. Google is now working with libraries to digitally scan books from their collections, and over time will integrate this content into the Google index, to make it searchable for users worldwide.

"We believe passionately that such universal access to the world’s printed treasures is mission-critical for today’s great public university," said Mary Sue Coleman, President of the University of Michigan.

For publishers and authors, this expansion of the Google Print program will increase the visibility of in and out of print books, and generate book sales via "Buy this Book" links and advertising. For users, Google’s library program will make it possible to search across library collections including...
out of print books and titles that weren't previously available anywhere but on a library shelf.

Users searching with Google will see links in their search results page when there are books relevant to their query. Clicking on a title delivers a Google Print page where users can browse the full text of public domain works and brief excerpts and/or bibliographic data of copyrighted material. Library content will be displayed in keeping with copyright law. For more information and examples, please visit print.google.com/googleprint/library.html.

About Google Inc.

Google's innovative search technologies connect millions of people around the world with information every day. Founded in 1998 by Stanford Ph.D. students Larry Page and Sergey Brin, Google today is a top web property in all major global markets. Google's targeted advertising program, which is the largest and fastest growing in the industry, provides businesses of all sizes with measurable results, while enhancing the overall web experience for users. Google is headquartered in Silicon Valley with offices throughout North America, Europe, and Asia. For more information, visit www.google.com.
